Webinar title

Identifying and prioritising drug targets using the Open Targets Platform

17th April, 2023 at 11:00

Speakers: **Helena Cornu and Annalisa Buniello**

EMBL-EBI

Open Targets

The Open Targets Platform — <https://platform.opentargets.org/> - is a comprehensive research tool that supports systematic identification and prioritisation of potential therapeutic drug targets. The Platform integrates publicly available datasets including data generated by the Open Targets consortium to build and score target-disease associations. Users can also explore relevant annotation information about targets, diseases or phenotypes, and drugs.

This webinar will provide an introduction to the Open Target consortium, and an overview of the Open Targets Platform. Participants will have the opportunity to explore the data available through the Platform in a series of exercises, followed by a Q&A session to dive deeper into data sources and data access options.

Organizer: Cristina Battaglia
